

Profile

Since 2010, I've been working on iOS app development, giving me extensive knowledge with both Objective-C and Swift, as well as iOS development in general.

Prior to iOS, I worked in Windows application development and online development, and I have over 18 years of experience in software engineering. My job experience includes starting my own business, working for a digital agency, freelancing, consulting, and working in large organisations.

Working in a variety of company formats forces me to learn and develop new talents. I was more of a full stack developer than a front end engineer, especially when working at a small digital agency or on freelancing projects. As a result, in addition to coding, I've acquired a wide range of skills, including but not limited to UX, VD, marketing, and so on. Moreover, working with different teams, clients, and other stakeholders has not only helped me develop strong skills and knowledge in software development, but it has also helped me understand how to interact with other teams, clients, and stakeholders.

Skills

iOS

- Proficient on Swift and Objective-C - 10+ years experience
- Solid experience with XCode, Cocoa and Interface builder
- Solid experience with UIKit, Core Animation, SQLite database, Core Data, JSON, XML, etc.
